

Inputs (frozen in advance)

Probe set

attack, matched and hard-negative probes

Detector corpora

NotInject, community role prompts, security abstracts

InjecAgent

frozen third-party cases and tool schemas

Served models

identity echo checked

Phases (against real systems)

Guards alone

full probe, passage alone, memory wrapper, detector panel

AutoGen team

observe, then block at each placement, keyword in data, prompt defenses, selector order

Other systems

NeMo Guardrails input rail, the same team in LangGraph and CrewAI

AutoGen team on InjecAgent

tool entry point, observe, then each placement blocks

Evidence (logs to paper)

Raw call logs

every call on one ordered counter

Analysis

macros and tables for the paper

Verifier

fails closed on any disagreement

Every phase drives a real system through its own interface, and every number is regenerated from the logs.
